

MetricMend AI presents

LifeMeld

Life, brought together.

AI assistance for everyday plans,
shared responsibilities and life admin.

PRE-SEED / \$500K TARGET

Current public website / September 2026

Life admin is fragmented.

Important work is scattered across apps, tabs, messages, documents and memory.

01 Context gets lost

Tasks separate from the people, events and documents they belong to.

02 Coordination stays manual

Plans require repeated follow-up across multiple disconnected tools.

03 Advice still needs follow-through

A helpful answer still leaves the user to complete the real work.

The opportunity

**One trusted place
that understands
context - then helps
move life forward.**

LifeMeld turns scattered administration into coordinated action.

Everyday life, connected

Personal organization, shared responsibilities and AI help in one product.

01

Melds

Goals with tasks, budgets, documents and milestones in one workspace.

02

Tasks & lists

Reminders, recurring tasks and shared checklists.

03

Money & shared living

Private budgets, receipt review, shared expenses, households and roommates.

04

Documents

Upload, extract and explain documents with relevant context for MINA.

05

RSVP

Invitations, guest responses, party sizes and host-guest messages.

06

MINA

Contextual answers, saved conversations, voice input and supported actions.

MINA connects questions to useful next steps

Answer general questions. Use relevant personal context. Carry out supported requests.

Authenticated action handlers perform supported changes. Plan proposals require user review. Streaming replies, bounded history and editable voice input support the same conversation.

A working product with an early usage signal

Web and iOS foundations are in place. The next stage is retention and customer validation.

LIVE

Web experience in production

iOS

Native mobile experience

TESTED

77 automated tests passed in the current local suite.

RLS

Access checks and RLS policies in the codebase.

EARLY SIGNAL / FOUNDER-REPORTED

RSVP has been used in a real event context.

Early usage has expanded beyond event coordination into household organization and individual work-task management.

Why now: AI can work with saved context

LifeMeld combines natural-language assistance with structured records and bounded actions.

01 Fragmentation persists

Life administration still spans many single-purpose tools.

02 Contextual assistance

MINA retrieves relevant LifeMeld records and uses recent conversation to answer follow-up questions.

03 Trust shapes adoption

Permission, ownership and confirmation matter when AI acts on personal information.

Product thesis: shared plans create reasons to return beyond a single AI answer.

A freemium model designed to grow with trust.

Current stage: pre-revenue. Free is available. Plus and Pro remain coming soon.

FREE

Start the habit

10 MINA credits per week,
1 active Meld and everyday tools.

PLUS / COMING SOON

Deepen the value

Configured for more Melds,
higher limits and read-only
Google connections.

PRO / COMING SOON

Support power users

Configured for greater capacity
and advanced assistance
across Melds.

Paid tiers are not open for purchase. Pricing and willingness to pay remain to be validated.

A focused path to repeat usage

A disciplined path from a working product to a repeatable consumer business.

Founder experience and product execution

**AKHIL
DEVABHAKTHUNI**

Founder, MetricMend AI

**10+ years
in data & analytics**

A builder across data, product and AI.

01 Enterprise foundation

A decade-plus working with data, analytics and business systems.

02 Product ownership

Built LifeMeld from concept through a live web and iOS experience.

03 Technical discipline

Testing, security and production architecture are part of the product from the start.

Raising \$500K to validate repeat usage

Pre-seed / MetricMend AI / LifeMeld as the primary investment story

PRODUCT

Refine the core experience and MINA action workflows.

RELIABILITY

Advance security, testing and production infrastructure.

VALIDATION

Measure activation, repeat usage and willingness to pay in focused cohorts.

DISTRIBUTION

Test RSVP and shared-life entry points for efficient customer acquisition.

INTENDED MILESTONE

A reliable core product, measurable repeat engagement and evidence of willingness to pay.
